FOREWORD FROM THE MINISTER

At the 2009 United Nations Climate Change Conference in Copenhagen, the former Prime Minister announced Malaysia's commitment to reducing its carbon emission intensity in comparison to Gross Domestic Products (GDP) by up to 40% by the year 2020 compared to the 2005 level, with the assistance from developed countries.

The country has achieved great progress since then, recording a 33% reduction in emission intensity by 2015. Building on this success and as a further commitment to tackling global climate change, Malaysia has ratified The Paris Agreement 2015 and re-pledged to reduce the country's carbon emission intensity of GDP by 45% by 2030.

In order to stand by our pledges, our actions have to be planned, informed and coordinated across different cities, townships and communities. We have to ensure that our future generations inherit a place that is not only fit for human habitation, but also conducive for future growth and prosperity.

As the nation's capital, Kuala Lumpur must lead the change. It is essential for Kuala Lumpur to put in place and implement concrete Low Carbon Society (LCS) blueprint towards reducing greenhouse gases (GHG) emissions of the city. I commend the Kuala Lumpur City Hall (KLCH) in leading the cause, and hope that the LCS blueprint would increase and strengthen investments in environmental assets, green technology and production for Kuala Lumpur.

May this initiative serve as a working model for other cities within Malaysia and beyond.

FOREWORD FROM THE MAYOR

Tan Sri Hj. Mhd. Amin Nordin bin Abd Aziz
Mayor of Kuala Lumpur

We have an ambitious vision yet achievable for Kuala Lumpur.

We envision Kuala Lumpur to be a World Class City by 2020. We are enhancing our economic growth, societal wellbeing and development of its people. We hope to see Kuala Lumpur on par with other global cities like Melbourne, Copenhagen, Tokyo and New York, by adopting a holistic approach in managing resources, environment and space within the city.

With this in mind, the Kuala Lumpur Low Carbon Society Blueprint 2030 (KL LCSBP 2030) is formulated. This blueprint will provide Kuala Lumpur City Hall (KLCH) with a strategic direction and clear framework for coordinating related policies and programs towards the reduction of GHG emissions for Kuala Lumpur. It also optimises the City's limited resources towards more effective and impactful implementation of various measures related to GHG emissions reduction.

Based on the projected development scenarios and baseline assessment of GHG emissions reduction potentials in 2020 and 2030, we have identified 10 Actions and 245 Programs to be implemented in a timely and proactive manner. I expect Kuala Lumpur City Hall to play the leading role in the process, engaging our stakeholders to work together in achieving our targets.

I wish to thank the UTM-Low Carbon Asia Research Centre team for their invaluable research efforts and consultation throughout the formulation of the Kuala Lumpur Low Carbon Society Blueprint 2030.

PREAMBLE

This Summary for Policymakers (SPM) offers a concise synopsis of the Kuala Lumpur Low Carbon Society Blueprint 2030 (the Blueprint). It is aimed at facilitating quick and convenient reference to the Blueprint's 10 Low Carbon Society (LCS) actions and the potential carbon emission reductions achievable from the implementation of the actions in Kuala Lumpur. It is targeted especially at readers who need to get a *straightforward yet sufficient* overview of the LCS actions and how the actions, severally and jointly, potentially contribute to reducing carbon emission levels in Kuala Lumpur, without the burden of unneeded technical complexities. Target reader groups include policy/decision makers or relevant officials of various public, private and/or not-for-profit entities, as well as stakeholder groups and citizens concerned with Kuala Lumpur's development and its impacts on the environment, society and climate change, and anyone who would like to have a role in reducing carbon emission in Kuala Lumpur.

This summary focuses readers on key explanations and justifications of each LCS 'action' and their supportive 'sub-actions' that are deemed vital and sufficient for guiding *strategic- and policy-level discussions and decision making*, saving all scientific and technical details to the master Blueprint document. Therefore, 'measures' and 'programs' that follow each LCS sub-action are listed under the relevant LCS action but specific descriptions and explanations of the measures and programs, which are more pertinent to the operational and implementation levels, have been excluded from this summary. When these and further technical details are required, and for better insight into the complete strategies to transform Kuala Lumpur into a low carbon society, readers should consult the master Blueprint document.

PREFACE to KL LCSBP 2030

Cities are increasingly recognised as the most effective and important non-state actors in mitigating global climate change in terms of yielding real cuts in urban Greenhouse Gas (GHG) emissions. Kuala Lumpur, as the Capital City and economic powerhouse of rapidly developing Malaysia, needs to lead the way to reducing GHG emissions of rapid economic growth, especially in contributing to the achievement of the national target of 45% reduction in GHG emission intensity of GDP by 2030 (compared to the 2005 level). To that end, the formulation and implementation of a holistic, scientifically grounded and people-centric city-level climate change mitigation plan – the Kuala Lumpur Low Carbon Society Blueprint 2030 (KL LCSBP 2030) – using the ‘Science to Action’ (S2A) approach are highly essential.

As a holistic plan, the KL LCSBP 2030 proposes 10 Actions, 37 Sub-actions, 82 Measures and 245 Programs for implementation that straddle three key thrusts: 1) Prosperous, Robust and Globally Competitive Economy; 2) Healthy, Creative, Knowledgeable and Inclusive Community; and 3) Ecologically Friendly, Liveable and Resilient Built Environment.

Being scientifically grounded, the internationally-recognised Asia-Pacific Integrated Model (AIM) has been used to project Kuala Lumpur’s GHG emission intensity reduction potential under various scenarios (with different sets of parameters and justified assumptions for the proposed Measures and Programs). The model shows Kuala Lumpur can potentially reduce its GHG emission intensity by up to 70% by 2030 (compared to the 2010 level), which is equivalent to an absolute reduction of 48,206 ktCO₂eq from the business as usual scenario.

As a people-centric plan, the proposed Actions, Sub-actions, Measures and Programs have been put under scrutiny and review by multiple stakeholders in three Focus Group Discussion (FGD) workshops. The KL LCSBP 2030 is therefore the outcome of review by, and feedback from, the multiple stakeholders engaged in the workshops.

Ultimately, the KL LCSBP 2030 seeks to be a people’s policy that is grounded in scientific research with practical implementation in mind. It will provide a strategic direction and clear framework for coordinating and consolidating various related but largely unconnected sustainability and climate change mitigation policies and programs to optimise the City’s limited resources towards more effective and impactful implementation of GHG reduction measures towards meeting the city’s emission intensity reduction target of 70% by 2030.

KEY MESSAGES TO POLICYMAKERS

1

Kuala Lumpur as Malaysia's economic capital and an emerging global city is well positioned to lead developing cities nationally and globally towards reducing significant GHG emissions of rapid economic growth

2

Kuala Lumpur presents a huge potential for reducing over 48,000 ktCO₂eq by 2030 and up to 70% of the reduction can be effected through measures and programs that are under KLCH's direct and indirect purviews

3

Immediate adoption and progressive implementation of LCS Blueprint by KLCH are crucial to putting Kuala Lumpur on the path towards achieving carbon neutrality beyond 2030

4

KLCH needs to work with, and secure effective buy-in of the KL LCSBP 2030 from, various stakeholders, including residents and the civil society; businesses and industries; as well as relevant ministries and federal agencies

KUALA LUMPUR

Function

National Capital of Malaysia. One of the major commercial, financial, education, entertainment, healthcare, cultural, and tourism centres of Asia.

Location

On the central west coast of Peninsular Malaysia, enclave within the State of Selangor and Klang Valley.

3.1390° N, 101.6869° E

Area

242km² (24,221 hectares)

BASIC PROFILE

1,674,621 (2010);
2,198,400 (2020 projected);
2,488,399 (2030 projected)

Population

RM 84,852 million (2010);
RM 227,621 million (2020 projected);
RM 399,013 million (2030 projected)

Gross Domestic Product

A World Class City

KUALA LUMPUR

70 BY 30

In transforming Kuala Lumpur towards achieving 70 by 30: A Greener and Better City by 2030, a clear sustainable and climate-responsive growth vision is crucial to frame and direct KLCH's commitment to becoming a leading city in combating climate change while simultaneously improving the city's economic, social and environmental performances. As Kuala Lumpur is envisioned to become a World Class Sustainable City by 2030, it needs to play a major global and sub-global role in tackling climate change and protecting the environment while benefiting all its residents, workers, visitors and investors socially and economically.

70 by 30 expresses Kuala Lumpur's aspiration to reduce the city's carbon emission intensity of GDP by up to 70% by 2030, which crucially supports Malaysia's renewed national carbon emission intensity reduction target of 45% by 2030. This calls for the adoption and implementation of ambitious yet achievable LCS measures and programs that have been formulated based on a holistic, Science-to-Action (S2A) and people-centric approach. The implementation of 245 LCS Programs, framed under 82 Measures, 37 Sub-actions and 10 LCS Actions, sets Kuala Lumpur on the path towards more ambitious carbon neutrality goals beyond 2030.

INTRODUCTION TO KL LCS

As Malaysia's vibrant capital city and commercial heart, and as a leading economic and cultural growth centre in Asia, Kuala Lumpur plays a pivotal role in the country's transformation towards becoming a socially progressive high income nation by 2020 and beyond.

In a climate changed world, it is essential that Kuala Lumpur realises its growth vision and at the same time contributes to meeting Malaysia's global commitment to reducing carbon emissions. The concept of LCS is therefore fundamental to guiding Kuala Lumpur's development up to 2030. The KL LCSBP 2030 will provide an effective policy platform for consolidating and coordinating in an integrated manner various related but largely unconnected sustainability and climate change mitigation policies that have been separately put in place over the years in Kuala Lumpur.

In doing so, the KL LCSBP 2030 lays down a strategic direction and clear policy framework that optimises Kuala Lumpur's limited resources towards more effective and impactful implementation of GHG reduction measures while enabling the city to continue its economic growth and social development visions.

POLICY CONTEXT OF KL LCSBP 2030

Towards decarbonising Kuala Lumpur's rapid economic growth and development, the city faces immense challenges in simultaneously meeting competing pro-growth and pro-environment goals, especially in the context of needing to advance institutionally less emphasised pro-environment goals within a traditionally deeply institutionalised pro-growth development policy framework. As such, it is critical that the formulation of the KL LCSBP 2030 carefully considers as much as possible all relevant global and national climate change mitigation and sustainable development policies as well as all existing national, regional and local development and environmental policies with a view to concretely linking the former with the latter policy sets.

The KL LCSBP 2030 therefore serves as a key policy instrument that translates and bridges between higher level sustainable, low carbon development policies (including the recent Sustainable Development Goals 2030, the Paris Agreement and the New Urban Agenda) and the city-level development policies (refer Figure 1).

Crucially, towards operationalising the KL LCSBP 2030, it needs to be streamlined into Kuala Lumpur's existing spatial development planning framework, in particular into the city's statutory development plans (the Kuala Lumpur Structure Plan and the Kuala Lumpur City Plan) so as to take effect through the statutory planning control process to which all developments within the city are subject.

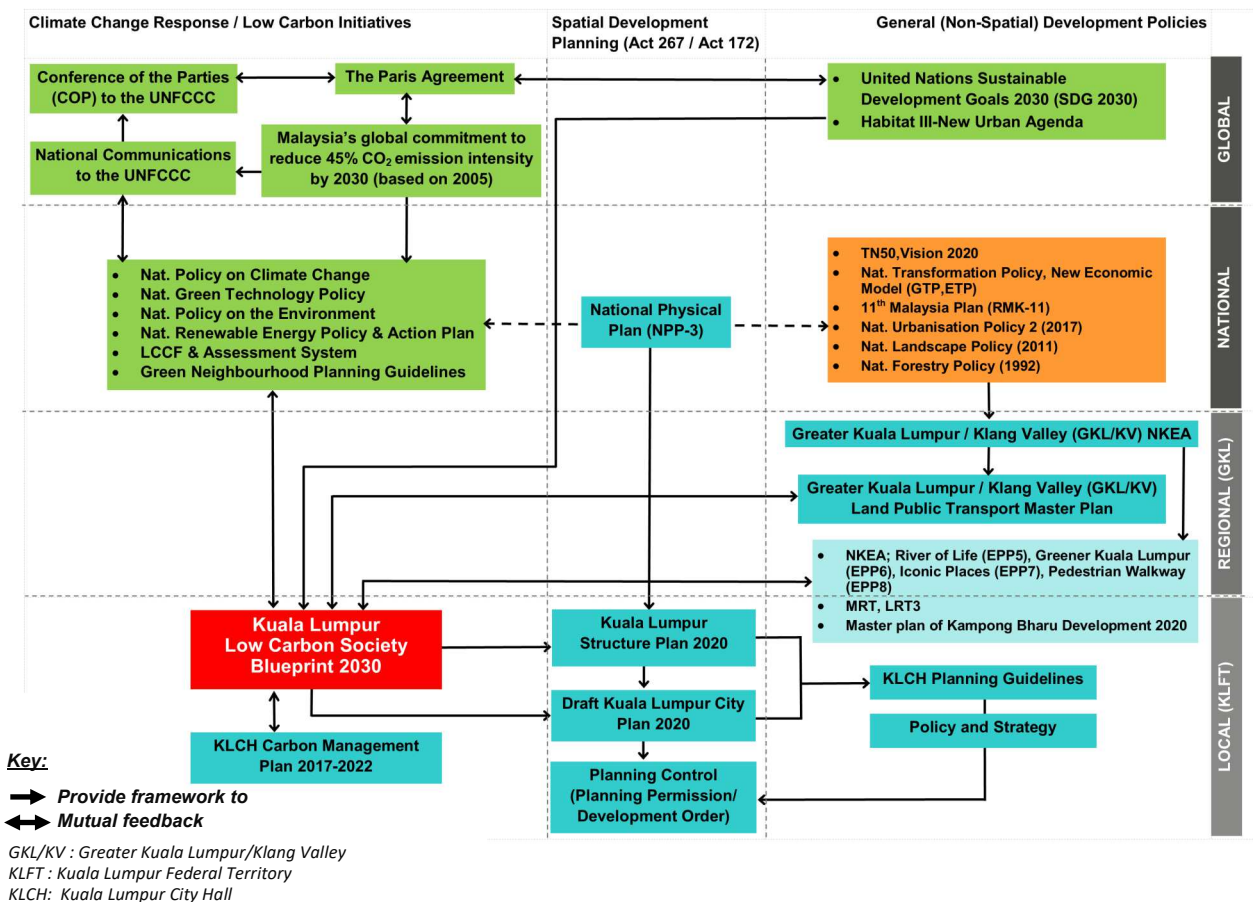

Figure 1: The policy context for the development of the KL LCSBP 2030

KL LCSBP 2030 PROCESS AND METHODOLOGY

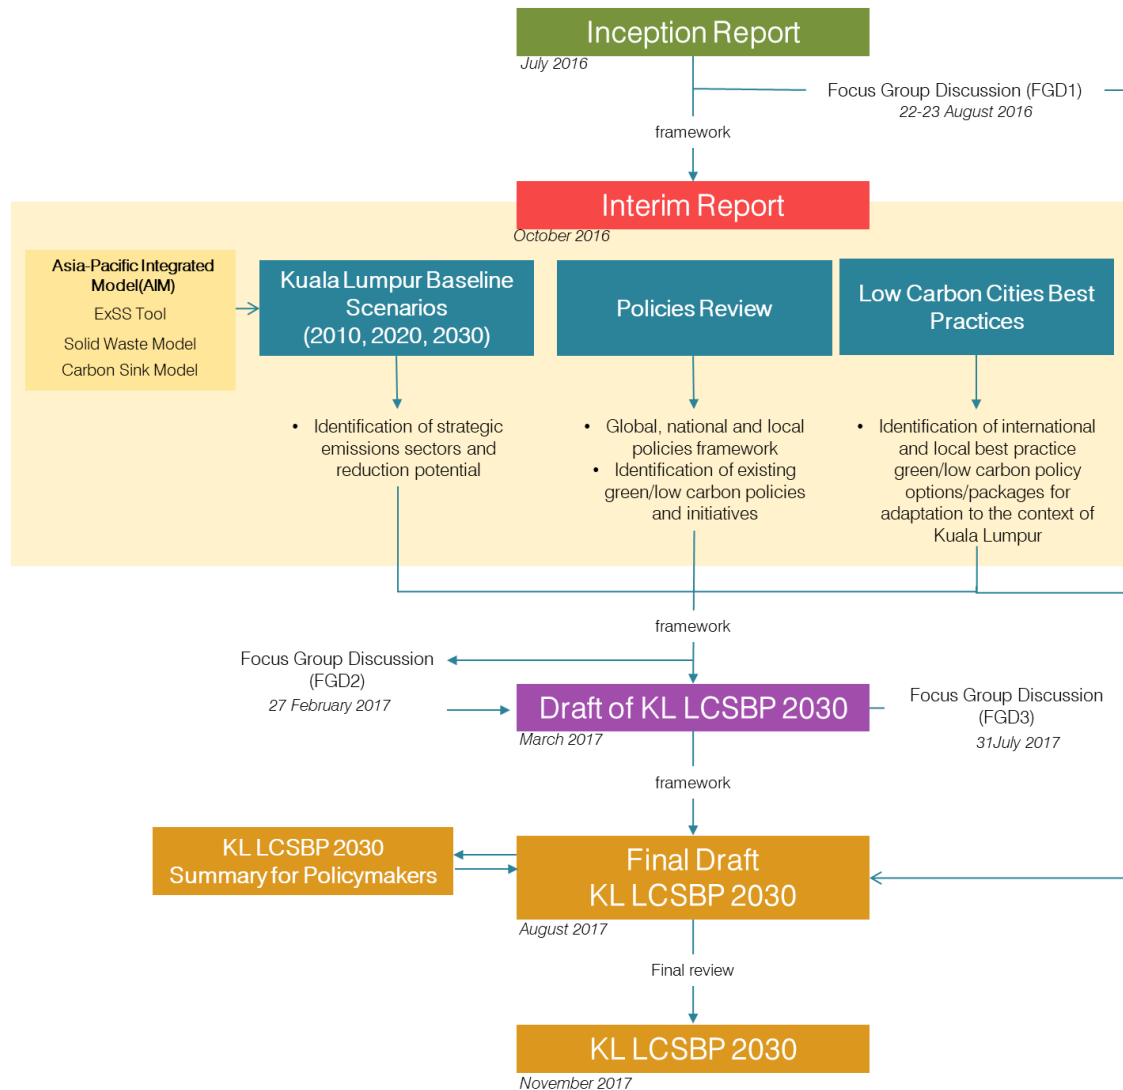

Figure 2: Project framework for KL LCSBP 2030

Formulation of the KL LCSBP 2030 began in July 2016 with a scoping exercise (Inception Report) that provided a framework for preparing the baseline study for Kuala Lumpur’s GHG emissions (Interim Report) (refer Figure 2). The baseline study comprises four key components, namely 1) the setting of various baseline development scenarios for Kuala Lumpur (2010, 2020, 2030); 2) a careful review of all relevant global, national and local policies with respect to sustainable and low carbon development; 3) precedent and benchmarking studies on international and local best practices on sustainable and low carbon development; and 4) GHG modeling using the internationally recognised Asia-Pacific Integrated Model (AIM) (refer Figure 3 for details).

In tandem with the preparation of the baseline study, a multiple stakeholder engagement workshop (the first Focus Group Discussion, FGD1) was conducted in order to gain feedback and comments on modeling results and framework assumptions used in the baseline study. Findings from the FGD1 were then synthesised with that of the baseline study and results from FGD2, which provided a subsequent framework for preparing the Draft KL LCSBP 2030.

The Draft KL LCSBP 2030 was put to a final scrutiny by multiple stakeholders in FGD3, from which refinements were made to the program structures and emissions results, to produce the KL LCSBP 2030 and its Summary for Policymakers (SPM).

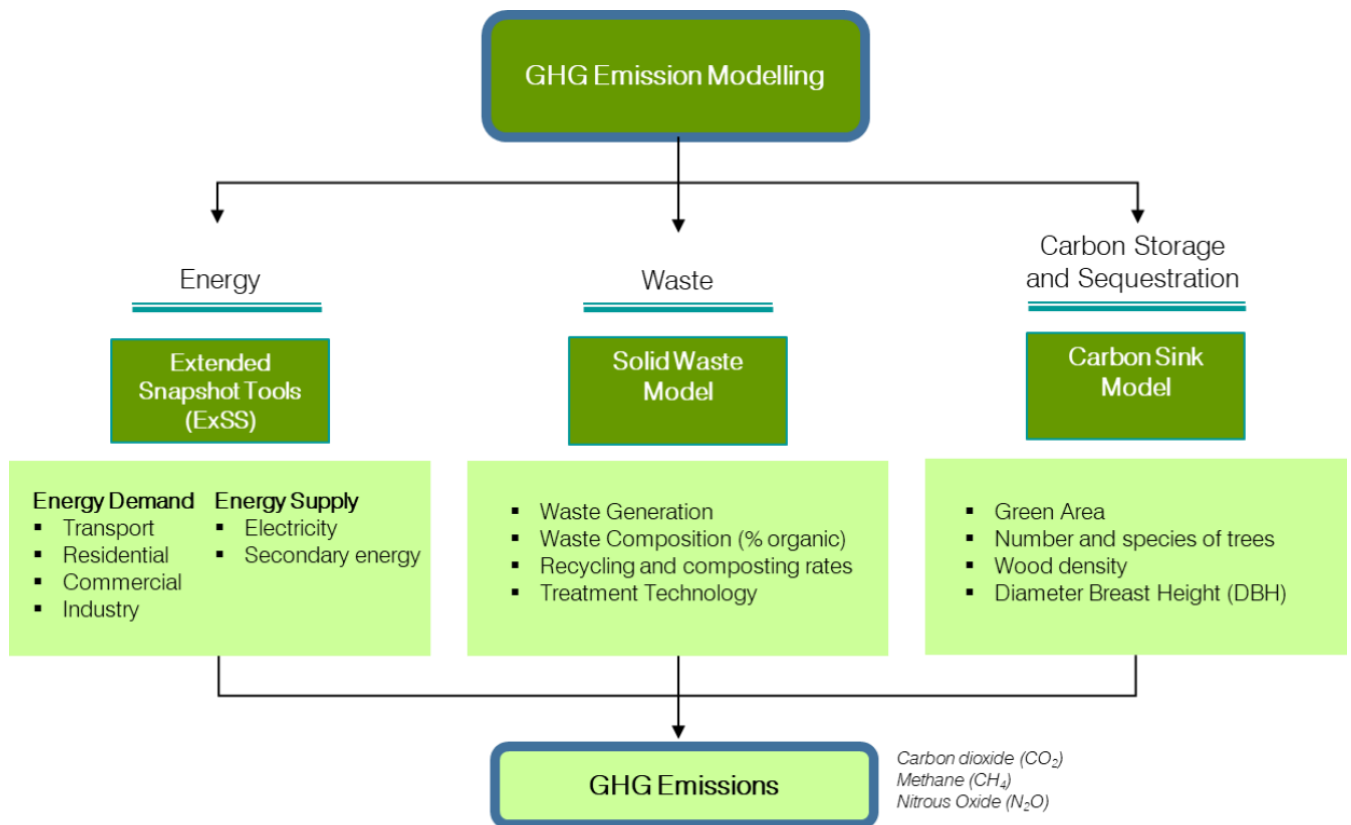

Figure 3: GHG Emission Modelling

The Asia-Pacific Integrated Model (AIM) quantifies GHG emissions for Kuala Lumpur for Business as Usual (BaU) and Counter Measure (CM) scenarios for 2020 and 2030. Three main models have been used including AIM's Extended Snapshot Tool (ExSS), Solid Waste Model (SWM) and Carbon Sink Model (refer Figure 3).

These models present the carbon emissions and reduction potentials of various low carbon countermeasures for Kuala Lumpur, which lead to the setting of priority sectors for effective emission reduction.

OBJECTIVES

The Kuala Lumpur Low Carbon Society Blueprint 2030 (KL LCSBP 2030) is a written document that presents comprehensive climate change mitigation policies and detailed strategies to guide the development of Kuala Lumpur towards becoming A World Class Sustainable City: A Greener Better Kuala Lumpur by 2030.

The blueprint incorporates various existing low carbon related plans and projects in Kuala Lumpur along with the Kuala Lumpur Structure Plan 2020 and Draft Kuala Lumpur City Plan 2020 in transforming Kuala Lumpur into a low carbon city. The blueprint discusses and provides more technical details of carbon mitigation options (with specific measures and programs) for implementation in Kuala Lumpur's development.

The blueprint aligns with the city's vision and aims to reduce the city's carbon emission intensity by 70% by 2030 while contributing to the economic growth targets. After an assessment of the current situation and future goals, the report lays down the following objectives:

- 1 To review **existing policies and development plans** of Kuala Lumpur;
- 2 To benchmark Kuala Lumpur with **selected global cities** in terms of **low carbon best practices**;
- 3 To develop baseline and future scenarios and **quantify carbon emissions** and **enhance co-benefits** of improved livability and green growth for Kuala Lumpur;
- 4 To develop a **roadmap** and identify the **relevant implementation agencies**.

ROAD TO ACHIEVING

70 BY 30 GOAL LOW CARBON KUALA LUMPUR GOALS AND INITIATIVES

KL LCSBP 2030 provides a strong foundation for promotion of economic growth, decoupling GHG emissions from growth and achieving various co-benefits, including the enhancement of quality of life in an equitable manner and protection of the environment. The LCS vision of Kuala Lumpur World Class Sustainable City 2030 is buttressed by three major thrusts: 1) prosperous, robust and globally competitive economy; 2) healthy, creative knowledgeable and inclusive community; and 3) ecologically friendly, liveable and resilient built environment. These thrusts are well aligned with the triple bottom line of sustainable development, the 17 Sustainable Development Goals (SDGs) 2030, the tree transformative commitments of the New Urban Agenda

as well as the Draft Kuala Lumpur City Plan 2020 (refer Figure 4). Kuala Lumpur World Class Sustainable City 2030 entails the creation of A Greener Better Kuala Lumpur that embraces a GHG emission intensity reduction target of up to 70% by 2030. To that end, 10 actions have been formulated which are organised under the three Thrusts that encompass Economy, Social and Environment. Actions under “Economy” include green growth (GG); energy efficient spatial structure (SS); green mobility (GM) and sustainable energy system (SE). Under “Social” is the action on community engagement and green lifestyle (CE) while under “Environment” are the actions of low carbon green building (GB); green and blue (BG); sustainable waste management (WM) and sustainable water management (WW). The last action—green urban governance (UG)—acts as the Kuala Lumpur low carbon society enabler.

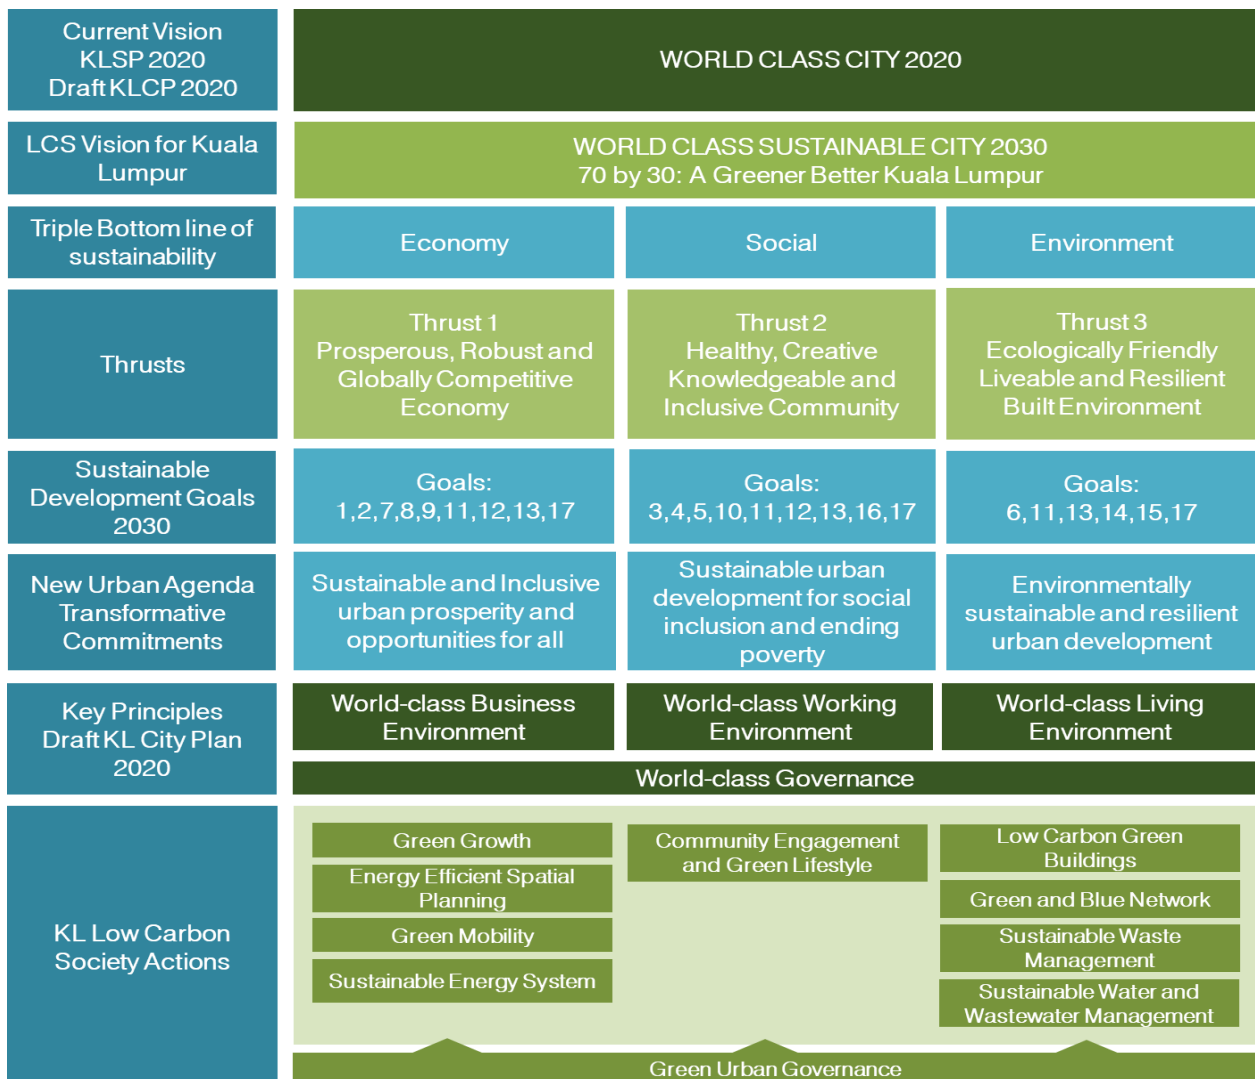

Figure 4: The framework of Kuala Lumpur Low Carbon Society Blueprint 2030

To provide a clear and effective framework for future implementation, monitoring and reporting of the KL LCSBP 2030, the 'work breakdown structure' (WBS) approach has been adopted. Through the WBS approach, key low carbon society actions are divided into sub-actions, which are further divided into measures and detailed implementation programs as described in Figure 5.

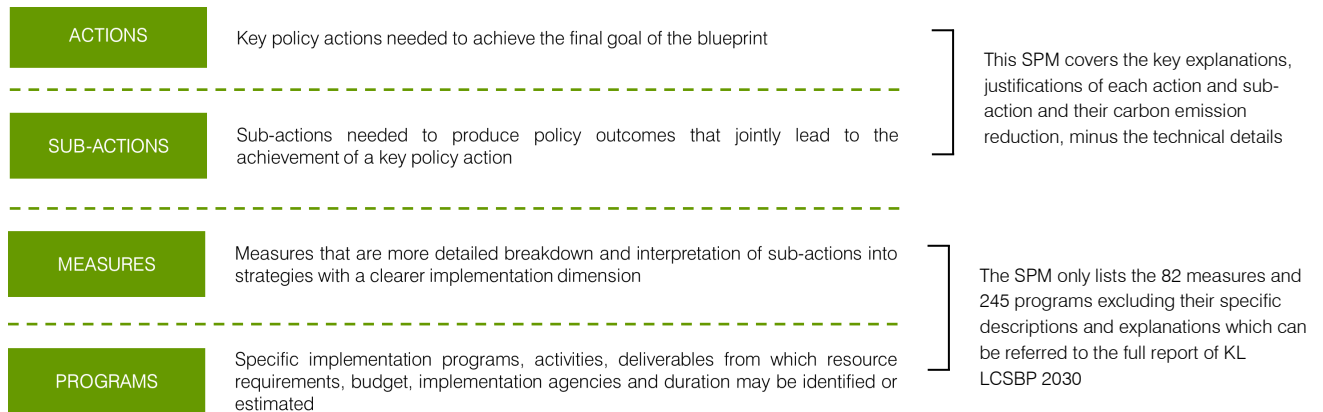

Figure 5: Work breakdown structure for Kuala Lumpur’s Low Carbon Society Blueprint 2030

KUALA LUMPUR

EMISSION PROFILE

GHG emission intensity of GDP

Figure 6 shows the GHG emission intensity of GDP of Kuala Lumpur. Based on Table 1, Kuala Lumpur's GHG emission intensity in 2010 is estimated at 0.30 ktCO₂eq/Mill.RM. In the 2030 CM scenario, the value decreases to 0.09 ktCO₂eq/Mill.RM, which is equivalent to a 70% reduction. This is higher than the national GHG emission intensity reduction target of 45% by 2030. As such, proper implementation of the KL LCSBP 2030 is essential to enable Kuala Lumpur to significantly contribute to Malaysia's global commitment to mitigating climate change while maintaining strong economic growth.

Table 1: GHG emission intensity by GDP

	2010	2020		2030	
		BaU	CM	BaU	CM
GDP (Mill.RM)	84,852	227,621	227,621	399,013	399,013
Total CO ₂ Emission (ktCO ₂ eq)	25,427	54,609	38,497	84,314	36,106
GHG Emission Intensity of GDP (ktCO ₂ eq/Mill.RM)	0.30	0.24	0.17	0.21	0.09
Reduction in Intensity	-	20%	43%	30%	70%

Figure 6: GHG emission intensity by GDP

EMISSION REDUCTION CONTRIBUTION BY ACTION

Towards providing further guidance to policymakers in prioritising and strategising implementation of the KL LCSBP 2030, the potential contribution of each of the 10 LCS Actions that have been identified has been estimated (refer Figure 7 and Table 2). With respect to LCS programs that come under direct and indirect purviews of KLCH, investments in Low Carbon Green Building, Community Engagement and Green Lifestyle, Green Mobility, Energy Efficient Spatial Structure and Green Growth are highly recommended as these jointly potentially contribute to over 64% of the targeted emission reduction in 2030.

Figure 7: The carbon emission reduction contribution for the 10 actions

Table 2: Carbon emission reduction contribution and share of 10 LCS Actions

Thrusts	Actions	Reduction (ktCO ₂ eq)	Share by Actions (%)*	Share by Thrusts (%)
Economy	Action 1 Green Growth (GG)	2,502	5.2	59
	Action 2 Energy Efficient Spatial Structure (SS)	2,872	6.0	
	Action 3 Green Mobility (GM)	6,868	14.2	
	Action 4 Sustainable Energy System (SE)	16,327	33.9	
Social	Action 5 Community Engagement and Green Lifestyle (CE)	9,015	18.7	19
Environment	Action 6 Low Carbon Green Building (GB)	9,673	20.1	22
	Action 7 Green and Blue Network (BG)	316	0.7	
	Action 8 Sustainable Waste Management (WM)	527	1.1	
	Action 9 Sustainable Water and Wastewater Management (WW)	105	0.2	
Enabler	Action 10 Green Urban Governance (UG)	-	-	0
Total		48,206	100	100

*Numbers may not add up precisely to 100% due to rounding

GREEN GROWTH

In the face of pressing economic and environmental challenges, national and international efforts to promote green growth as a new source of economic growth have been intensified in recent years. The current economic system is not only unsustainable and inefficient in its resource use, but is inequitable in its distribution of costs and benefits. A business that does not invest in low carbon measures will be at risk of being locked out of low-carbon growth markets demand and may experience a reduced market share in the traditional economy in the future. Align with Kuala Lumpur vision of becoming “a sustainable city” and achieving 70% GHG reduction by 2030, the progression towards low carbon society must ensure that carbon reduction targets are met without compromising the economic growth of the city.

Sectoral contribution to CO₂ emission reduction

1.1 Kuala Lumpur as a Green Business Hub

It is important for KLCH to develop Kuala Lumpur into a business hub that provides business owners and investors clear guide to its strategic directions, priority sectors, policy framework, incentives and procedures on investing in Kuala Lumpur.

Measure 1.1.1 Promote New Green Sectors and Services

Programs:

GG 1 Establish Kuala Lumpur as a major global venue for annual exhibitions, conferences and/or workshops on green businesses and investments

GG 2 Promote and attract R&D activities in strategic green sectors that are suited to Kuala Lumpur's economic and business ecosystems

GG 3 Establish a Green Enterprise Zone in each of Kuala Lumpur's six strategic zones to accommodate new green businesses and investments

Measure 1.1.2 Incentives and Fiscal Measures to Attract Green Businesses

Programs:

GG 4 KLCH to work with relevant ministries/agencies to create viable taxation systems and incentive mechanisms to attract strategic green sectors and Foreign Direct Investment (FDI) in green business

GG 5 KLCH to collaborate with relevant agencies and liaise with major financial institutions to expand on environmental investment opportunities and create attractive loan options for green investments

GG 6 Put in place procedures that expedite approval processes for green business and investments in Kuala Lumpur

1.2 Greening Existing Business

Measures such as reducing energy and resource intensity of existing businesses and green incentives and taxation for greening business are identified in order for greening every business in Kuala Lumpur to take place.

Measure 1.2.1 Reduce Energy and Resource Intensity of Existing Businesses

Programs:

GG 7 Progressive requirement for greener operation & eco-efficient policies in business administration, supply chain, and operations

GG 8 Promotion of environmental analytical & advisory services towards improving resource & energy efficiency in existing businesses

GG 9 KLCH to lead the way in preparing institutional/ establishment level 5-year carbon management plan to reduce institutional/ establishment operational carbon emissions

GG 10 Create "KL Green Business Champions" by engaging KL's dominant building uses and/or biggest energy users (e.g. major offices, hotels, shopping malls, hospitals, educational institutions and restaurants) in greening their administration, supply chain and operation

Measure 1.2.2 Green Incentives and Taxation for Greening Business

Programs:

GG 11 Introduce green incentives that cover and support existing businesses' green initiatives in investment and/or innovation in reducing energy and resource intensity of their administration, supply chain and operations

GG 12 Provide green incentives for business to set up an environmental & energy performance unit that generates green employment

GG 13 Introduce prestigious annual green awards that recognise and/or reward existing businesses that achieve significant results in resource and energy efficiency improvement in their overall operations

1.3 Establish Green Economy Ecosystem

Green economy focusing on the consumers as one of the players in the ecosystem. It is important to strengthen institutional support for green growth, create and expand green markets and capacity building in Kuala Lumpur.

Measure 1.3.1. Strengthen Institutional Support for Green Growth

Programs:

GG 14 Establish a Green Economy Unit in KLCH to promote, coordinate, advise, enable and facilitate the setting up of green businesses and markets in Kuala Lumpur

GG 15 KLCH through the Green Economy Unit to facilitate businesses and public sector organisations in solicitation of advice from relevant agencies (e.g. GreenTech Malaysia, MESTECC) on energy efficiency and renewable energy

GG 16 Develop a Green Growth Action Plan for Kuala Lumpur that clearly outlines KLCH's green growth policy direction and strategies, and provides clear policy guidance to green businesses and investors

Measure 1.3.2 Create and Expand Green Markets

Programs:

GG 17 All government entities within KLCH area to implement the Government Green Procurement (GGP) practice

GG 18 Set up and maintain a "Kuala Lumpur Green Portal" that provides real-time information on Kuala Lumpur's LCS progress, green technologies, green jobs, green education and links to key government green portals

GG 19 Widespread adoption of green certification (e.g. MyHIJAU Mark) for all range of green products and services within Kuala Lumpur to provide consumers with an authoritative and reliable guide to the emerging green market

GG 20 Encourage business establishments in Kuala Lumpur to tap into the MyHIJAU platform to expand connections to other green businesses and wider consumers

1.4 Capacity Building

Kuala Lumpur needs diverse range of workers with broad skill sets as well as workers that can cope with shifting demands in skills set. The adoption of green growth in Kuala Lumpur will create new jobs and redefine existing occupations. These changes involve the process such as reskilling, cross-skilling, and upskilling of new work practices.

Measure 1.4.1 Human Capital Enhancement

Programs:

GG 21 Work with the academia, industry and relevant government agencies to establish Kuala Lumpur as the regional hub for accredited professional short courses on green growth and green businesses

GG 22 Develop systematic up-skills programs for progressive upgrading/retraining of existing pool of professional and semi-professional workers in various green sectors

GG 23 Fiscal incentives for business establishment that offer continuous professional education for current employees in the green sector

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers
Measure 1.1.1 Promote New Green Sectors and Services						
GG 1 Establish Kuala Lumpur as a major global venue for annual exhibitions, conferences and/or workshops on green businesses and investments				Corporate Planning Dept.	KW (Corporate Communication), MIDA, MESTECC, MOTAC, MOHR	GreenTech Malaysia
GG 2 Promote and attract R&D activities in strategic green sectors that are suited to Kuala Lumpur's economic and business ecosystems				Corporate Planning Dept.	KLCH (Administration Dept.), KW (Corporate Communication, and Policy Planning Dept.), MIDA	MIDA, GreenTech Malaysia
GG 3 Establish a Green Enterprise Zone in each of Kuala Lumpur's six strategic zones to accommodate new green businesses and investments				City Planning Dept.	KLCH (Economic Planning & Development Dept.), KW (Corporate Communication), MIDA, MOHR	Business assoc.
Measure 1.1.2 Incentives and Fiscal Measures to Attract Green Businesses						
GG 4 KLCH to work with relevant ministries/agencies to create viable taxation systems and incentive mechanisms to attract strategic green sectors and Foreign Direct Investment (FDI) in green business				Corporate Planning Dept.	KW (Policy Planning Division), GreenTech Malaysia, InvestKL, KLN, SSM	MIDA, SSM
GG 5 KLCH to collaborate with relevant agencies and liaise with major financial institutions to expand on environmental investment opportunities and create attractive loan options for green investments				Corporate Planning Dept.	KW (Finance, and Policy Planning Dept.), MIDA, MESTECC, SSM, SME Corporation	Business assoc., SME assoc.
GG 6 Put in place procedures that expedite approval processes for green business and investments in Kuala Lumpur				Economic Planning & Development Dept.	GreenTech Malaysia, SSM, InvestKL, PEMANDU, MIDA, SME Corporation, MITI, MIGHT	KLCH (Economic Planning & Development Dept.)
Measure 1.2.1 Reduce Energy and Resource Intensity of Existing Businesses						
GG 7 Progressive requirement for greener operation & eco-efficient policies in business administration, supply chain, and operations				City Planning Dept.	KW (Policy Planning Dept.), SSM, GreenTech Malaysia, MIDA	SSM, Business assoc.
GG 8 Promotion of environmental analytical & advisory services towards improving resource & energy efficiency in existing businesses				Licensing & Petty Traders Development Dept.	KW (Corporate Communication), SSM, GreenTech Malaysia, MAESCOs, MIDA	Business assoc.
GG 9 KLCH to lead the way in preparing institutional/establishment level 5-year carbon management plan to reduce institutional/establishment operational carbon emissions				Administration Dept.	KLCH (Administration Dept. (<i>Jawatankuasa Tenaga</i>))	KLCH (Administration Dept.)
GG 10 Create "KL Green Business Champions" by engaging KL's dominant building uses and/or biggest energy users (e.g. major offices, hotels, shopping malls, hospitals, educational institutions and restaurants) in greening their administration, supply chain and operations				Licensing & Petty Traders Development Dept.	SSM, MIDA, GreenTech Malaysia	Business assoc., Building owners
Measure 1.2.2 Green Incentives and Taxation for Greening Business						
GG 11 Introduce green incentives that cover and support existing businesses' green initiatives in investment and/or innovation in reducing energy and resource intensity of their administration, supply chain and operations				Property Management & Valuation Dept.	KW (Corporate Communication), SSM, MIDA, GreenTech Malaysia, MOF	Business assoc.

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers
Measure 1.2.2 Green Incentives and Taxation for Greening Business						
GG 12 Provide green incentives for business to set up an environmental & energy performance unit that generates green employment		High		Administration Dept.	KW (Finance, Corporate Communication, and Socio Economic), SSM, MIDA, GreenTech Malaysia, MOF	Business assoc.
GG 13 Introduce prestigious annual green awards that recognise and/or reward existing businesses that achieve significant results in resource and energy efficiency improvement in their overall operations		High		Licensing & Petty Traders Development Dept.	KW (Corporate Communication), SSM, MIDA, GreenTech Malaysia	Business assoc.
Measure 1.3.1. Strengthen Institutional Support for Green Growth						
GG 14 Establish a Green Economy Unit in KLCH to promote, coordinate, advise, enable and facilitate the setting up of green businesses and markets in Kuala Lumpur		High		Administration Dept.	KLCH (Human Resource Dept.), MIDA, GreenTech Malaysia, SSM	KLCH (Administration Dept.)
GG 15 KLCH through the Green Economy Unit to facilitate businesses in solicitation of advice from relevant agencies (e.g. GreenTech Malaysia, MESTECC) on energy efficiency and renewable energy		High		Administration Dept.	KLCH (Human Resource Dept.), GreenTech Malaysia, MESTECC, SEDTA, MAESCOs	Business assoc.
GG 16 Develop a Green Growth Action Plan for Kuala Lumpur that clearly outlines KLCH's green growth policy direction and strategies, and provides clear policy guidance to green businesses and investors		High		Administration Dept.	KW (Policy Planning, and Corporate Communication), GreenTech Malaysia, MIDA, SSM	KLCH (City Planning Dept.), Business assoc.
Measure 1.3.2 Create and Expand Green Markets						
GG 17 All government entities within the KLCH area to implement the Government Green Procurement (GGP) practice		High		Administration Dept.	GreenTech Malaysia	Business assoc.
GG 18 Set up and maintain a "Kuala Lumpur Green Portal" that provides real-time information on Kuala Lumpur's LCS progress, green technologies, green jobs, green education and links to key government green portals (e.g. MyHIJAU)		High		Information Management Dept.	GreenTech Malaysia, MIDA	KLCH (Information Management Dept.)
GG 19 Widespread adoption of green certification (e.g. MyHIJAU Mark) for all range of green products and services within Kuala Lumpur to provide consumers with an authoritative and reliable guide to the emerging green market		High		Administration Dept.	GreenTech Malaysia	KLCH (Administration Dept.), GreenTech Malaysia
GG 20 Encourage business establishments in Kuala Lumpur to tap into the MyHIJAU platform to expand connections to other green businesses and wider consumers		High		Administration Dept.	GreenTech Malaysia, KW (Corporate Communication)	Business assoc.
Measure 1.4.1 Human Capital Enhancement						
GG 21 Work with the academia, industry and relevant government agencies to establish Kuala Lumpur as the regional hub for accredited professional short courses on green growth and green businesses		High		Human Resource Management Dept. (IDB)	KPM, KW, SSM, MIDA, GreenTech Malaysia	KLCH (Human Resource Management Dept. (IDB)), Business assoc.
GG 22 Develop systematic up-skills programs for progressive upgrading/retraining of existing pool of professional and semi-professional workers in various green sectors		High		Human Resource Management Dept. (IDB)	KPM, SSM, GreenTech Malaysia	KLCH (Human Resource Management Dept. (IDB)), Business assoc.
GG 23 Fiscal incentives for business establishments that offer continuous professional education for current employees in the green sector		High		Human Resource Management Dept. (IDB)	KLCH (Licensing and Petty Traders Development Dept.), KW (Finance), SSM, GreenTech Malaysia	KLCH (Licensing and Petty Traders Development Dept.), Business assoc.

High  Medium  Low 

ENERGY EFFICIENT SPATIAL STRUCTURE

Kuala Lumpur's population is expected to increase to 2.49 million by 2030. With the growing population, along with the scarcity and increasing demand for urban spaces in Kuala Lumpur, the spatial structure of this metropolis needs to be efficiently developed to reduce its energy consumption and CO₂ emission. This can be achieved by promoting polycentric spatial structure, materialising Transit Oriented Development (TOD) as well as encouraging walking and cycling as a mode of travel within suitable distance. Kuala Lumpur needs a more human-oriented urban design, which offers its residents a healthy and safe living environment, higher quality of life whilst reducing travel and energy demand as well as cost of living. This requires continuous collaboration between city planners, key economic actors and residents of Kuala Lumpur.

Sectoral contribution to CO₂ emission reduction

2.1 Compact Urban Form

Rapid development and economic growth coupled to limited land and strong demand for housing and urban space points to the importance of having a more compact urban form, which promotes higher density development with mixing of various activities as well as pedestrian and cyclist-friendly environments with better accessibility to services and facilities within closer proximity.

Measure 2.1.1 Promote Polycentric, Compact Growth Pattern in Kuala Lumpur

Programs:

- SS 1** Gradual densification in polycentric nodes connected by public transportation
- SS 2** Focus on high density mixed use development to minimise the need to travel
- SS 3** Plan to achieve a compact, contiguous pattern of growth – looking “inward and upward”

Measure 2.1.2 Promote Transit Supportive Land Use Planning

Programs:

- SS 4** Promote higher intensity urban development around transit stations
- SS 5** Rationalise key locations for TOD in relation to existing and proposed MRT and LRT networks
- SS 6** Station Area Planning (SAP)
- SS 7** Concentrate provision of new affordable homes around transit stations

2.2 Walkable and Cyclist-Friendly Urban Districts

Creating a human-oriented environmentally friendly urban design, which is a key aspect of a low carbon society, will eventually contributing to the CO₂ emission reduction. Like other cities such as Copenhagen, Amsterdam and especially Singapore, Kuala Lumpur can potentially solve its traffic problem by providing extensive and comprehensive pedestrian walkways and cycling lanes.

Measure 2.2.1 Enhance Interconnected Pedestrian Network

Programs:

- SS 8** Design permeable street layouts
- SS 9** Identify and connect discontinuities within existing pedestrian network and sub-urban areas
- SS 10** Create continuous active street frontages
- SS 11** Safe walking routes to schools and public institutions

Measure 2.2.2 Providing Comfortable and Safe Walkways

Programs:

- SS 12** Street planting for shades
- SS 13** Improve street furniture
- SS 14** Extend existing covered walkways to include all main pedestrian routes
- SS 15** Enforce universal design concept

Measure 2.2.3 Build Quality Public Spaces and Pedestrian Environments that Support Walking

Programs:

- SS 16** Identify potential urban spaces as public realms
- SS 17** Improve and redesign existing pocket parks
- SS 18** Conduct pedestrian Level of Service (LOS) analysis on high pedestrian traffic areas

Measure 2.2.4 Providing Safe and Comfortable Cycling Network

Programs:

- SS 19** Engaging local cycling clubs in planning Kuala Lumpur cycling routes
- SS 20** Dedicated cycle lanes on major routes in Kuala Lumpur
- SS 21** Bike Expressway (Bike E-Way) from suburbs area to city centre and along major rivers and railway lines

Photo credit: UTM LCARC

Measure 2.2.5 Crime Prevention Through Environmental Design (CPTED)

Programs:

- SS 22** Install CCTVs
- SS 23** Set up security beats at appropriate locations
- SS 24** Increase natural surveillance through proper building orientation and landscape design
- SS 25** Eliminate blind spots in urban environments
- SS 26** Enhance street lighting along pathway and other pedestrian used areas

Photo credit: Oxford Street by James Reid, 2014

2.3 Designing Civilised and Livable Streets

The liveability of streets decline as the traffic volumes and speeds increase. Streets with moderate to low traffic volume and speed are more satisfying to residents. In line with Kuala Lumpur policy documents in ensuring the safety of all road users, "traffic calming" should be introduced. Traffic calming can potentially control the volume and speed of traffic for example via road humps and 30km/h traffic sign which have been used in roads in Amsterdam and Barcelona.

Measure 2.3.1 Street Environment Enhancement

Programs:

- SS 27** Create 'home zones' in residential areas
- SS 28** Community landscaping program

Measure 2.3.2 Reducing Vehicular Traffic Speed for Enhanced Pedestrian Safety

Programs:

- SS 29** Carriageway narrowing, chicanes, pavement widening and kerb extension at junctions
- SS 30** Install humped pedestrian crossings and raised junction plateau

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers
2.1.1 Promote Polycentric, Compact Growth Pattern in Kuala Lumpur						
SS 1 Gradual densification in polycentric nodes connected by public transportation	████████████████████			City Planning Dept.	KLCH (Civil Engineering & Urban Transportation Dept.), Neighbouring local authorities, MOT	Developers
SS 2 Focus on high density mixed use development to minimise the need to travel	████████████████████			City Planning Dept.	MOT, KPKT	Developers

GREEN MOBILITY

With the targeted strong growth in the economy and population in Kuala Lumpur, rapid growth in intra- and intercity passenger and freight transportation demand is inevitable. If left unchecked, growth in the transportation sector is expected to add to Kuala Lumpur carbon emission by 26,919 ktCO₂ and increased the transportation demand by 2030. In order to mitigate the carbon emission level of the projected increasing transportation demand, the development towards green mobility in Kuala Lumpur is essential. Its main purpose is to reduce Kuala Lumpur's carbon emission by inducing a voluntary modal shift from motorised vehicles to walking and cycling for short to medium distance trips, at the same time promoting public transport use. Undoubtedly, green mobility will create and promote a new culture of sustainable mobility in the Kuala Lumpur city.

3.1 Active Mobility

Active mobility is a form of transport of people and goods which use physical activity of the human being such as walking and cycling.

Measure 3.1.1 Promote Walking and Cycling on Short to Medium Trips

Programs:

- GM 1** Provision of bicycle facilities
- GM 2** Pedestrian and cycling priority at crossings
- GM 3** Cycle Safe and Right
- GM 4** Promote cycling as an attractive transport mode beyond recreational purposes
- GM 5** Establish bike rental program – KL Cycle Hire Scheme

Measure 3.1.2 Designate Pedestrian Zones in Key Activity Centres

Program:

- GM 6** Identify potential activity centres for implementation of pedestrian zones

3.2 Integrated Public Transportation

Integrated public transport system tends to meet the need of customers, which ultimately results in the increment of ridership.

Measure 3.2.1 Public Transport System Improvement (Bus and Rail)

Programs:

- GM 7** Route network expansion planning
- GM 8** Re-rationalisation of existing bus lane network
- GM 9** Strengthen enforcement against misuse of dedicated bus lanes
- GM 10** Work with relevant agencies to advocate for high capacity, fast, frequent and reliable rapid transit
- GM 11** Provide real time arrival information at all bus stops and rail stations
- GM 12** Reimaging public transport
- GM 13** Implement flat rate tickets and central area free shuttle services
- GM 14** Develop and promote web-based journey

Photo credit: www.data-display.com

Measure 3.2.2 Seamless Intermodal Transfer (Interchange Facilities)

Programs:

- GM 15** Integrated e-ticketing system (across all platforms)
- GM 16** Public transport interchange as destination and urban activity nodes
- GM 17** Upgrading bus and rail integrated terminal
- GM 18** Enhance 'Park and Ride' facilities in sub-urban transit nodes

Photo credit: UTM LCARC

3.3 Diffusion of Low Carbon Vehicles

It is imperative that the diffusion of low carbon vehicles in Kuala Lumpur to play its role as a potential to minimise the carbon impact of private vehicles for a low carbon future in Kuala Lumpur.

Measure 3.3.1 Promote the Use of Green Vehicles

Programs:

- GM 19** KLCH to use viable low carbon vehicles
- GM 20** Partnering with EV car sharing companies
- GM 21** Tax reduction for green vehicle purchase
- GM 22** Gradual phasing out for conventional diesel engine buses

Photo credit: www.autorentalnews.com

3.4 Enhancing Traffic Flow Conditions and Performance

Enhancing traffic flow in Kuala Lumpur means delivering more reliable journey times and more free-flowing travel conditions than at present.

Measure 3.4.1 Transport Demand Management

Programs:

- GM 23** Enhance Intelligent Transportation System (ITS)
- GM 24** Chart out practical timeline for progressive implementation of congestion pricing scheme
- GM 25** Parking demand management
- GM 26** Intelligent traffic control and support eco driving
- GM 27** Enhance the use of effective Variable Message Signs (VMS)
- GM 28** Improve traffic signal performance
- GM 29** Tidal flow and contra-flow along primary radial routes

Photo credit: www.paultan.org

3.5 Green Freight Transportation

Government policies should focus on freight transport as much as it focuses on private vehicles and public transport.

Measure 3.5.1 Modal Shift to Greener Freight Transport Modes

Programs:

- GM 30** Promote hybrid freight transport through tax incentives in hybrid freight transport acquisition

Measure 3.5.2 Freight Demand Management (FDM)

Program:

- GM 31** Optimal scheduling of pick-up and delivery

Photo credit: UTM LCARC

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers

SUSTAINABLE ENERGY SYSTEM

Energy consumption of a modern society like Kuala Lumpur city is far less sustainable with high carbon emissions from the centralised power generation. As a countermeasure, the development of sustainable energy systems comprising efficient energy (in terms of operation and management) and renewable power generation are necessary. To accommodate a complex network of energy-demanding premises which are not initially designed with sustainable energy consumption criteria, there is still a long way to go for KLCH and relevant stakeholders to harmonise the existing situation with the sustainable energy consumption practices, besides stimulating renewable resources in the current power system.

33.9%

16,327 ktCO₂eq

Sectoral contribution to CO₂ emission reduction

4.1 Utilise Renewable Energy

Maximising the penetration of renewable and sustainable energy sources is an effective means of reducing the GHG emissions, via reduction of fossil fuel combustion for power generation.

Measure 4.1.1 Solar Energy System

Programs:

SE 1 To provide solar farms

SE 2 To promote PV and solar thermal system on buildings

SE 3 To promote PV system on public infrastructure

Measure 4.1.2 Waste-to-Energy

SE 4 Conversion of waste oil to biodiesel for KLCH transportation

SE 5 To recover energy from municipal solid waste using gasification

SE 6 Energy harvest from sewage treatment plant

SE 7 To convert food waste to energy

4.2 Enhance Efficient Energy System

The prediction from the Intergovernmental Panel on Climate Change (IPCC) reveals that a 75% reduction in energy consumption can be achieved by incorporating holistic and systematic energy efficiency strategies in buildings' design and operation, rather than improving individual component efficiency (M. Zaid et al., 2013).

Measure 4.2.1 Advanced Energy System

Programs:

SE 8 Implementation of district cooling system

Measure 4.2.2 Energy Storage System

Programs:

SE 9 To promote energy storage for efficient energy consumption

SE 10 Promote thermal energy storage for cooling

4.3 Implement Effective Energy Management System

As a countermeasure, an effective implementation of energy management system and some effective energy efficiency (EE) programs shall be scrutinised. Strengthening the funding and financial assistance are also vital for promoting a sustainable energy management system.

Measure 4.3.1 Energy Management System

Programs:

SE 11 To obtain certification in energy management system

SE 12 Implementation of online energy monitoring

4.4 Funding and Incentives to Encourage Energy Efficient and Renewable Energy Strategies

Sufficient funding and subsidies have to be provided for incentivising the energy efficiency strategies.

Measure 4.4.1 Funding and Incentives Support

Programs:

SE 13 To provide tax incentives for Waste-to-Energy (WtE) Initiatives

SE 14 Energy Performance Contracting to overcome financial barriers

COMMUNITY ENGAGEMENT AND GREEN LIFESTYLE

People are the core element in achieving sustainability. Establishing a low carbon society whereby residents are practising low carbon behaviour is an essential element in transforming Kuala Lumpur into a world recognised low carbon city. However, changing how people behave is a challenging task and is time consuming. In response to this challenge, empowering community to undertake low carbon initiatives and adopt a low carbon lifestyle via effective action plans is highly crucial to motivate and support the establishment of low carbon society in Kuala Lumpur.

5.1 Sustainable Consumption

Operation of electrical appliances to support modern lifestyle consume massive amount of electricity and considering that electricity is generated by power plant, mainly from natural gas and coal, it can lead to carbon emission.

Measure 5.1.1 Foster Sustainable Consumption Behaviour

Programs:

- CE 1 Survey sustainable consumption practice
- CE 2 Stimulate sustainable consumption practice
- CE 3 Strengthen sustainable consumption practice
- CE 4 Sustain sustainable consumption practice

Measure 5.1.2 Promote Use of Technology that Contributes to Low Carbon Society

Programs:

- CE 5 Promote the adoption of Energy Star Rating/eco-labelling appliances
- CE 6 Promote the adoption of rainwater harvesting system
- CE 7 Promote the adoption of photovoltaic panel

5.2 Low Carbon Society

Awareness about low carbon is a must in converting a society into a low carbon society. Local citizen's awareness can be fostered via a series of public relation and marketing campaign and educational campaign.

Measure 5.2.1 Public Community Awareness

Programs:

- CE 8 Communicate LCS progress through mass media
- CE 9 Raise environmental awareness through community-based social marketing program

Measure 5.2.2 Community Awareness through Education

Programs:

- CE 10 KLCH to collaborate with agencies and schools/pre schools on educating public
- CE 11 Virtual science centre for children and youth education
- CE 12 Develop new climate projects for children and youth
- CE 13 Climate Ambassador program
- CE 14 Green School Awards program
- CE 15 Introduce Eco-Life Challenge (ELC) in schools

5.3 Public Involvement

Alternatively, viewing the local community as partner by the local authority via fostering public involvement and engagement into low carbon initiative is an important strategy in promoting co-operation and collaboration between the authority and the local community as well as among the member of the community in moving towards a low-carbon society.

Measure 5.3.1 Community Engagement and Involvement

Programs:

- CE 16** Introduce Community Energy Saving program
- CE17** Promote community garden association and urban farming
- CE 18** Setting up database to record low carbon activities
- CE 19** Setting up Low Carbon Residential Association
- CE 20** Setting up community-based waste recycling centre
- CE 21** Introduce Waste to Wealth program
- CE 22** KLCH to collaborate with local communities in green space design

Measure 5.3.2 Increase Community Involvement in Community Safety and Security

Programs:

- CE 23** Set up community/police patrolling
- CE24** Set up Business Improvement District (BID)

Photo credit: KLCH

5.4 Green Lifestyle

Lifestyle is closely related to the formulation of a sustainable low carbon city.

Measure 5.4.1 Green Lifestyle and Smart Working Style

Programs:

- CE 25** Promote 'Work-from-Home' and the adoption of flexi working hours initiative
- CE 26** Reinforce 24 degree Celsius campaign
- CE 27** Promote *Cool Biz* campaign
- CE 28** Introduce turn-off Idling engine campaign
- CE 29** Promote "Stop Open Burning" campaign
- CE 30** Promote Eco-driving campaign

ACTION 6

LOW CARBON GREEN BUILDING

Kuala Lumpur as the capital city of Malaysia has become one of the major commercial centres in Asia region, which comprises many headquarters of multinational corporations as well as mega shopping building complexes. With the total area of 242 km², about 28% of the city's land use are used for commercial and residential buildings. Buildings contributed to 49% from the total of Kuala Lumpur's GHG emission where 10,329 ktCO₂ generates from commercial buildings and 2,152 ktCO₂ from residential buildings, respectively. In fact, about 80% of the commercial and residential space supply in Kuala Lumpur city centre is from the existing buildings (Kuala Lumpur Structure Plan 2020). With the rapid growth of GDP in the city, the total GHG emission from the building sector will rise about three times by 2030. Therefore, countermeasures are urgently needed for both the new and existing buildings.

20.1%

9,673 ktCO₂eq

Sectoral contribution to CO₂ emission reduction

6.1 Implementation of Sustainable Design Strategies

By responding to the local climatic conditions, which include the sun, wind and rain, buildings can reduce their dependency on mechanical and electrical equipment that require energy to achieve indoor comfort.

Measure 6.1.1 Efficient Building Envelope Performance

Programs:

GB 1 Minimum building envelope requirements

GB 2 Reduction of heat gain from direct solar radiation

GB 3 Maximising daylighting zone

GB 4 Promoting the use of natural ventilation

GB 5 Retrofitting the existing building envelope

Measure 6.1.2 Mitigation of Urban Heat Island (UHI) Phenomenon

Programs:

GB 6 Using appropriate materials on building surfaces

GB 7 Increasing the requirement of building green covering

GB 8 Improving coverings of the existing buildings

Measure 6.1.3 Increasing Building Water Efficiency

Programs:

GB 9 Implementation of rainwater harvesting

GB 10 Reduction of potable water consumption

GB 11 Improving water efficiency of existing buildings

Measure 6.1.4 Sustainable Low Carbon Building Construction

Programs:

GB 12 Incentives for certified low carbon green building materials and products

GB 13 Reuse of building materials for redevelopment projects

6.2 Usage of Energy Efficient (EE) & Renewable Energy (RE) Building Technologies

Efforts are needed to reduce the usage of non-renewable energy sources towards achieving zero energy or carbon neutral building.

Measure 6.2.1 Energy Efficient Air Conditioning System

Programs:

GB 14 High efficiency air conditioner for new non-residential buildings

GB 15 Conversion to high efficiency air conditioner for existing buildings

Measure 6.2.2 Energy Efficient Lighting System

Programs:

- GB 16** Energy efficient lighting system for new buildings
- GB 17** Conversion to energy efficient lighting for existing buildings

Measure 6.2.3 Renewable Energy System

Programs:

- GB 18** Installation of renewable energy system in commercial buildings
- GB 19** Implementation of net metering for PV System

Photo credit: <http://www.kenan-flagler.unc.edu>

Measure 6.2.4 Other Energy Efficient Equipment and Systems

Program:

- GB 20** Incentives for energy efficient products and electrical appliances usage

6.3 Monitoring and Management of Green Buildings

Maintenance and monitoring of the performances of green buildings require additional measures and are essential to assure the sustainability of these buildings with low carbon emission.

Measure 6.3.1 Low Carbon Green Building Monitor

Programs:

- GB 21** Low Carbon Green Building Calculator
- GB 22** Low Carbon Building Award (LCBA)

Measure 6.3.2 Low Carbon Green Building Plan

Programs:

- GB 23** Submission of low carbon building plan
- GB 24** Submission of sustainable building waste management plan
- GB 25** Submission of Green Building User Manual

Measure 6.3.3 Sustainable Management and Building Audit

Programs:

- GB 26** Energy Management System (EMS) requirement
- GB 27** Smart and centralised building data collection
- GB 28** Modernising facility management for existing buildings
- GB 29** Building energy audit and certificate

GREEN AND BLUE NETWORK

Enhancing green and blue elements in Kuala Lumpur city provides higher carbon sink and better liveable environment to the city inhabitants. Rapid development resulted in the decrease of green and blue elements in Kuala Lumpur. Based on the projection, carbon sink capacity of green infrastructure in Kuala Lumpur may rise from 1,067.65 (year 2010) to 1,746.36 ktCO₂ in 2030. KL LCSBP 2030 aims to increase the green cover of Kuala Lumpur from 10% (2010) to 30% (2030). In achieving this aim, the city's green space indicator (GSI) is expected to be increased from 0.36 to 2.0 hectare per 1000 population; which is corresponding to the current GSI of Melbourne, New York, and Toronto.

0.7%

316 ktCO₂eq

Sectoral contribution to CO₂ emission reduction

7.1 Green Cover Protection

Preserving and conserving these green elements is very important to maintain their high carbon storage capability and to mitigate the urban heat island effect.

Measure 7.1.1 Enhance Forest Conservation

Programs:

- BG 1** Protect existing reserved forests
- BG 2** Law enforcement and governance

Measure 7.1.2 Improve Urban Parks Health

Programs:

- BG 3** Develop an integrated pest management plan
- BG 4** Inspect and retain topsoil quality of urban parks

7.2 Promote Tree Planting

In order to utilise the tree planting program in an effective manner, measures as below are formulated to meet the 2.5 million trees target by 2030.

Measure 7.2.1 Achieve Appropriate Canopy Cover

Programs:

- BG 5** Establish canopy cover target by locations
- BG 6** Identify new planting spaces
- BG 7** Introduce 'no net tree canopy cover loss' policy

Photo credit: UTM-LCARC

Measure 7.2.2 Develop Tree Establishment Program

Programs:

- BG 8** Establish tree inventory
- BG 9** Prepare a 15-year tree planting plan
- BG 10** Organise 'One Resident, One Tree' program

Measure 7.2.3 Establish Diversity in Tree Population

Programs:

- BG 11** Develop standards for species at specific location
- BG 12** Develop a native tree seedlings project

Photo credit: UTM-LCARC

Measure 7.2.4 Preserve and Enhance Local Natural Biodiversity

Programs:

- BG 13** Manage green cover to enhance biodiversity
- BG 14** Reintroduce, where appropriate, 'lost' or rare native species in natural areas
- BG 15** Develop Kuala Lumpur green cover preservation master plan
- BG 16** Improving existing policies by laws
- BG 17** Revise the existing 'open space' policy

7.3 Improve Green Cover Maintenance

Tree maintenance improve the survival period of trees and other plants by pruning, watering, fertilization planning and keeping the surrounding environment clean.

Measure 7.3.1 Ensure Departments of KLCH Operate with Common Goals

Programs:

BG 18 Organise inter-departmental workshops on tree maintenance program

BG 19 Using tree for place making

Measure 7.3.2 Monitor Existing Canopy Cover

Programs:

BG 20 Carry out tree surveys for existing green areas

BG 21 Encourage reporting of illegal tree felling

Measure 7.3.3 Undertake Research to Improve Green Cover Performance and Encourage Adaptive Management

Programs:

BG 22 Form research partnerships with local institutions to study different aspects of green cover

7.4 Facilitate Local Community Engagement

The engagement of local community by facilitating events and workshops and by consultation and cooperation with stakeholders such as private landholders, developers, nurseries, and citizens at the neighbourhood can increase the awareness and acknowledge the importance of canopy cover.

Measure 7.4.1 Increase Public Awareness

Programs:

BG 23 Facilitate events and educational workshops

7.5 Promote More Water Bodies

Open water bodies are a great source of moisture for a relatively dry urban environment.

Measure 7.5.1 Preserve and Create Attractive Waterfronts

Programs:

BG 24 Monitor and improve water quality

BG 25 Increase new water elements

BG 26 Create linear urban parks along river and waterway reserves

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers
Measure 7.1.1 Enhance Forest Conservation

SUSTAINABLE WASTE MANAGEMENT

Rapid urbanisation is expected to change urban consumption patterns of Kuala Lumpur's residents. It is estimated that a total of 1,582 ktCO₂ GHG emission generated by waste coming from both landfill and waste transportation within Kuala Lumpur year 2030. Inadequate and inefficient waste collection, recycling or treatment, and uncontrolled disposal of waste in dump areas could cause severe effects such as health risks to human beings and pollution to the environment. With these severe environmental issues arising from managing solid waste, protective and preventive measures should be in place to minimise the adverse effects of these issues to Kuala Lumpur.

1.1%

527 ktCO₂eq

Sectoral contribution to CO₂ emission reduction

8.1 Sustainable Municipal Solid Waste (MSW) Management

Sustainable municipal solid waste (SMSW) management facilitates holistic approach in handling waste to reduce the environmental impact from the increased generation of waste and its disposal.

Measure 8.1.1 Nurturing Zero-Waste Culture

Programs:

WM 1 Encourage culture of sharing, borrowing, repairing and renting

WM 2 Promote the use of greener packaging, reusable bag

WM 3 KLCH to promote global “Love Food Hate Waste” initiative

WM 4 Encourage waste separation at source premises

WM 5 “Pay as You Throw” (PAYT) program

WM 6 Recycling of used cooking oil from residential premises

Measure 8.1.2 Promoting Education and Awareness on Waste Reduction

Programs:

WM 7 Involvement and promotion of green school initiative

WM 8 Organising reduction and awareness campaigns on enforcement of Act 672

Measure 8.1.3 Electronic Waste (E-waste) Reduction

Programs:

WM 9 Implementation of E-waste recycling program

Measure 8.1.4 Commercial Waste Reduction

Programs:

WM 10 Development and implementation of recycling commercial waste policies

WM 11 Food waste collection and treatment from commercial premises

Photo credit: feldavoice.com

8.2 Fostering Circular Economy (CE)

CE is known as an alternative to a traditional linear economy (make, use, dispose) in which resources are kept in use for as long as possible, extract the maximum value while in use, then recover and regenerate products and materials at the end of each service life.

Measure 8.2.1 Promoting Sustainable Consumption and Production (SCP)

Programs:

WM 12 Encouraging purchases of products made of recycled materials

WM 13 Development and implementation of Eco-Town

WM 14 Adoption of paperless meeting

SUSTAINABLE WATER AND WASTEWATER MANAGEMENT

Kuala Lumpur is facing similar challenges when it comes to water resources and wastewater management. The city is vulnerable to prolonged periods of dryness, when reservoir levels drop to dangerously low levels. This precarious situation happens even though Kuala Lumpur usually receives at least 2,600 mm of rain annually. On the flip side, the urban drainage system in the City centre is overstrained during heavy downpours, leading to flash floods. As Kuala Lumpur is heavily reliant on surface water, it is also vulnerable to river pollution, where the bulk of raw water comes from. It is expected that the pollution nearby Sungai Langat, Sungai Semenyih and Sungai Selangor are recurring examples grey water recycling will be important option for sustainable water and wastewater management.

Sectoral contribution to CO₂ emission reduction

105 ktCO₂eq

9.1 Water Supply Management

There are three measures introduced that are suitable for KLCH which includes: minimising the use of drinking quality water for nonpotable functions, reduction of non revenue water (NRW) loss and smart water management.

Measure 9.1.1 Minimising the Use of Drinking Quality Water for Non-Potable Functions

Program:

WW 1 KLCH to work with relevant agencies to develop viable non potable water system distribution in Kuala Lumpur for new residential and commercial development

Measure 9.1.2 Reduction of Non Revenue Water (NRW) Loss

Programs:

WW 2 Collaborate with respective agencies for incorporating smart water technologies that allow water providers to minimise Non- Revenue Water (NRW)

WW 3 Encourage and promote community awareness practice towards reduction of NRW

Measure 9.1.3 Smart Water Management System

Program:

WW 4 Kuala Lumpur smart water management

9.2 Sustainable Wastewater Management

Management of wastewater in the urban context must be adapted according, not only to the size, but also to the economic development and governance capacity of the urban area.

Measure 9.2.1 Limit Wastewater Production

Programs:

WW 5 Work with relevant agencies to promote reduction at source

Measure 9.2.2 Maximizing the Value of Wastewater

Programs:

WW 6 Collaborate with relevant agencies to promote usage of recycled wastewater in Kuala Lumpur

WW 7 Collaborate with relevant agencies and academics institution to utilise bioenergy harvesting method for energy recovery

WW 8 Collaborate with respective agencies on composting sewage sludge from wastewater

WW 9 Promote use of phosphorous recovery from wastewater as new sustainable fertiliser alternative

WW 10 Collaborate with respective agencies to use and promote sludge as soil amendment

WW 11 Promote application of sewage sludge in urban landscaping and forest rehabilitation and regeneration

9.3 Stormwater Management

In moving towards sustainability, KLCH should take up the approach of control-at-source in managing stormwater in Kuala Lumpur. With this approach, quality and quantity of the runoff from developing an area can be maintained to be the same as predevelopment condition.

Measure 9.3.1 Incorporation of Low Impact Development (LID) in Stormwater Management

Programs:

WW 12 Adoption of Low Impact Development (LID) in Kuala Lumpur

WW 13 Promote installation of run off storage

Measure 9.3.2 Elimination or Minimisation of Non-Point Source Pollutants

Programs:

WW 14 Establish partnership with agencies in educating and training public and industries

WW 15 Support implementation of Best Management Practices at construction site

WW 16 Promote incorporation of NPS pollution prevention strategies and policies into regional and official community plans

WW 17 Promote effluent management

SUSTAINABLE WATER AND WASTEWATER MANAGEMENT

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers
Measure 9.1.1 Minimizing the Use of Drinking Quality Water for Non-Potable Functions						
WW 1 KLCH to work with relevant agencies to develop viable non potable water system distribution in Kuala Lumpur for new residential and commercial development				Economic Planning & Development Dept.	KLCH (Infrastructure Planning Dept., Health and Environment Dept., Community Development & Urban Wellbeing Dept.), KATS, SPAN, SYABAS, JPS	SPAN, Developers, SYABAS

High  Medium  Low 

GREEN URBAN GOVERNANCE

With the emergence of the concept of sustainable cities, there has been a growing interest in the role which cities could have in addressing global environmental issues and, in particular, climate change. The past decade has witnessed a new wave of municipal actions on climate change mitigation in which transnational municipal networks have grown and multiplied, while a more geographically diverse range of cities have become involved in addressing this issue. In an increasingly urbanising world with emissions producing activities concentrated in cities, the question of how municipal authorities and other actors might intervene in order to reduce their impact remains a significant one.

Green Urban Governance programs do not lead to direct carbon emissions reduction in Kuala Lumpur but they are fundamental to the effective implementation of vital CO₂ emissions reduction measures and programs of most other LCS actions

10.1 Enabling Development of Low Carbon Society (LCS)

Providing funding and training are key means through which municipal governments can enable action by private sector organisations or even by individuals. However, it is important for KLCH to provide enough financial resources through the ability to secure funding from external sources such as from ministry as MESTECC or agencies such as GreenTech Malaysia or MIDA.

Measure 10.1.1 Fund, Grant and Sourcing

Programs:

UG 1 Identifying existing pool of funds

UG 2 Setting up special unit for fund and grant sourcing for projects/programs that related to realisation of LCS

Measure 10.1.2 Incentives, Subsidies, Taxation Framework

Programs:

UG 3 Collaboration with relevant agencies to work out possible framework for incentives/subsidies/taxation

UG 4 Rebates for developments that comply with low carbon policies

UG 5 Energy Efficiency and Renewable Energy Management Centre which provides partial monetary aid to domestic users for the installation of solar water heating systems

Measure 10.1.3 Staff Development

Programs:

UG 6 Awareness programs and continuous training conducted by KLCH on low carbon development

UG 7 Ensuring complementarity with other research based activities in Malaysia that are focused on the low carbon/green skills agenda

UG 8 Identifying funding package for pilot training, capacity building and skills development, which will support the stimulation and growth of low carbon built environment workforce in Kuala Lumpur

10.2 KLCH as Low Carbon Leader

Municipal initiatives in the self-governing mode have also involved the development of 'exemplar' or best practice buildings, to showcase the possibilities of new technologies and of energy efficiency standards.

Measure 10.2.1 Introduction of Best Practice for Institutional Behaviour Change towards Low Carbon

Programs:

UG 9 KLCH Carbon Management Plan towards going low carbon

UG 10 Procurement of vehicles which runs on new and emerging sustainable technologies in council's fleet and assessing their performance

UG 11 Encouraging environmentally friendly behavior in the workplace

Measure 10.2.2 Demonstration Project on Low Emission Technologies

Programs:

UG 12 Replacement of bulbs and banning of incandescent lighting in the government building

UG 13 Trial of low emissions technologies on city hall's buildings

UG 14 Effective usage of air-conditioner

UG 15 Setting up a target of increasing energy efficiency within the municipality by 20% by 2030

UG 16 Building Energy and Monitoring Reporting System (BEMRS)

10.3 Setting up Command and Control through Regulations

KLCH should ensure that it is vital to mandate local action for CO₂ mitigation and enabling planning authorities to take climate change into account in their decision-making.

Measure 10.3.1 Development Planning for Low Carbon Kuala Lumpur

Programs:

UG 19 Institutionalisation of low carbon vision and carbon reduction targets in all statutory plans (KLSP 2020 and KLCP 2020)

UG 20 Design clear low carbon zoning and urban design codes that are geared towards Kuala Lumpur's energy efficient spatial structure

UG 21 Launching of a new social housing model that integrates green areas, public spaces and environmental design

Measure 10.2.3 Sustainable Operation and Energy Consumption

Programs:

UG 17 Work with partners in the city to build new neighbourhood-scale renewable energy system

UG 18 Energy consumption mapping for energy management

Measure 10.3.2 Planning Control Process, Procedures and Mechanism for Materialising LCS in Kuala Lumpur

Programs:

UG 22 Mandatory requirement for new government buildings to adopt green performance framework and achieve the qualified level of recognition

UG 23 Enhance substantive (content) aspects of development order approval

UG 24 Online submission for applications with respect to development projects (e-Submission)

UG 25 Progressive retraining of planners, architects, engineers and other built environment professionals and semiprofessionals

UG 26 Setting up of a low carbon monitoring unit/task force in KLCH

10.4 Partnership through Multi Stakeholders Engagement

In addition to engaging a range of stakeholders and partners in addressing climate change locally, municipalities have, sometimes, also sought to involve communities in responding to the challenges of reducing GHG emissions.

10.4.1 Encouragement on Low Carbon Practices

Programs:

UG 27 To promote energy and water efficiency in public facilities

UG 28 To promote extensive use of online services to citizens

Measure 10.4.2 Low Carbon Projects with NGOs

Programs:

UG 29 Awards and recognition for any corporates or NGOs efforts towards low carbon

UG 30 Existing LA21KL unit to collaborate with community and NGOs on low carbon and environmental friendly campaigns

Programs	2015-2020	2021-2025	2026-2030	Responsible KLCH Department	Key Partners	Implementers
Measure 10.1.1 Fund, Grant and Sourcing						
UG 1 Identifying existing pool of funds				Finance Dept., Administration Dept.	MESTECC, KLCH (Economic Planning & Development Dept., Quantity Surveying Dept.), KW	KLCH (Finance Dept., Economic Planning & Development Dept.)
UG 2 Setting up special unit for fund and grant sourcing for projects/programs that related to realisation of LCS				Finance Dept., Administration Dept.)	KLCH (Administration Dept. Quantity Surveying Dept., Finance Dept., Economic Planning & Development Dept., Human Resource Management Dept.), MESTECC, KW	KLCH (Human Resource Management Dept.)
Measure 10.1.2 Incentives, Subsidies and Taxation Framework						
UG 3 Collaboration with relevant agencies to work out possible framework for incentives/subsidies/ taxation				Finance Dept., Administration Dept.)	KLCH (Building Control Dept. City Planning Dept., Legal and Prosecution Dept., Finance Dept.), MESTECC, SEDA, GreenTech Malaysia	KLCH (Economic Planning & Development Dept.)

HOW TO READ KL LCSBP 2030 ROADMAP

Methods of Program Evaluation through FGD

Kuala Lumpur Low Carbon Society Blueprint 2030 is formulated to help guide Kuala Lumpur towards becoming a world class sustainable city by 2020. This blueprint will provide Kuala Lumpur City Hall with a strategic direction and clear framework for coordinating related policies towards the reduction of 70% GHG emissions intensity for Kuala Lumpur by 2030 based on 2010 level with the implementation of 245 policy programs in a timely and proactive manner. Towards the implementation phase, several questions must be answered such as which programs should be implement first? How long is the implementation timeline? When is the target implementation year? Which potential implementation agencies should play important role in carrying out the programs? Thus, the roadmap section provides pathway to the stated questions by outlining programs proposed in the blueprint according to the given priority, timeline and related implementation agencies for 2015-2020, 2021-2025 and 2025-2030 periods. The roadmap is subject to review to accommodate possible institutional and organisational roles changes both external and internal to KLCH that may arise from time to time.

This section explains briefly the KL LCSBP 2030 method of program evaluation through focus group discussions (FGD). Three sessions of FGD had been conducted in August 2016, and February and July 2017 during the Interim Report, Draft Blueprint and Final Draft KL LCSBP 2030 stages. The purpose of FGD1 was to introduce the KL LCS 2030 and share the preliminary baseline results of Kuala Lumpur in 2010, building continuous engagement with stakeholders and understanding their feedback and views on overall direction, scope, and methodology of KL LCS 2030. Based on the outcome of FGD1, the Draft Kuala Lumpur Low Carbon Society Blueprint 2030 (Draft KL LCSBP 2030) was produced to outline the proposed LCS programs for implementation. The FGD2 was then held to present the proposed programs outlined and gain feedback from stakeholders with respect to the FGD1. The FGD2 also involved the presentation of draft proposal of sub-actions, measures, and LCS programs outlined in the Draft KL LCSBP 2030, based on three weighted three main criteria: i) Significance, ii) Suitability and iii) Feasibility. The definition for the three main criteria are as follows:

Significance - Measures the extent to which proposed LCS programs are in line with a stakeholder's institutional/corporate goal or policy direction.

Suitability - Appraises the appropriateness, acceptability and readiness of Kuala Lumpur's stakeholders on the proposed LCS programs with respect to Kuala Lumpur's local geographic setting and socio-cultural context.

Feasibility - Gauges the "implementability" of proposed LCS programs in terms of institutional and corporate financial capacity and human capital, as well as technological readiness and material resource availability in Kuala Lumpur.

Stakeholders were requested to assign a rating to each proposed LCS project based on three (3) levels which are Low (L), Medium (M) and High (H).

Programs	Significance Institutional Vision/Policy Direction			Suitability Long Geography setting/ socio-cultural context			Feasibility Finance/Human Capital/ Local Technology/Material		
	L	M	H	L	M	H	L	M	H
	CE6 Promote the adoption of rainwater harvesting system			●			●		
CE7 Promote the adoption of photovoltaic panel					●	●			

The results were then analysed using the 'weighted scoring method' involving i) allocation of weights for each evaluation criterion, and ii) allocation of scores to each rating level to reflect each LCS program's performance in relation to each criterion. The result presented in a single weighted score for each criterion was then summed across for each proposed LCS program. The sum of the weighted score indicates the overall performance of a potential program, which combines all the three criteria of significance, suitability, and feasibility.

1) Criteria weightage

The three criteria were weighted to reflect the stakeholders' consensus on the relative importance of each criterion. Justification for the weights ascribed (Significance (40%), Suitability (20%), and Feasibility (40%)) was recorded to ensure the basis of the weights assigned is fully understood and accepted. Both the significance and feasibility criteria were equally given higher percentages as they were considered the most important compared to suitability. Ultimately, all the weights amounted to 100.

2) Score the levels to reflect how each program performs against each criterion and calculate the weighted scores

The next step was to score each level against each criterion on a suitable scale. A score value of 1,2, or 3 was assigned correspondingly to the rating level of Low (L), Medium (M) and High (H), and each LCS program was given a total score, by multiplying the score with the weightage that has been assigned to the criterion. The resulted weighted scores were then summed up to obtain an aggregate weighted score for each potential program (refer table below):

Criteria	Significance (40%)			Suitability (20%)			Feasibility (40%)		
Level	Low	Medium	High	Low	Medium	High	Low	Medium	High
Score	1	2	3	1	2	3	1	2	3

Programs	Significance Institutional Vision/Policy Direction	Suitability Long Geography setting/socio- cultural context	Feasibility Finance/Human Capital/ Local Technology/Material	Weighted Score
CE6 Promote the adoption of rainwater harvesting system	2	3	3	83

3) Interpret the results

The weighted score results were then carefully translated into the importance level of Low, Medium and High with the target year in the implementation timeline (determined from the participants in FGD) to guide decision-makers. The three ranges of weighted scores were averaged for each different Action of the KL LCSBP 2030 accordingly and coloured based on the level of importance: light-gray (Low), medium-gray (Medium), and black (High) (refer below).

Weighted scores	0-39	40-79	80-100
Colour			

The Draft KL LCSBP 2030 and Summary for Policymakers (SPM) were then presented in the FGD3 for further refinement of the LCS programs and roadmap (timeline and responsible actors). Based on the outcome of FGD3, the Final Draft KL LCSBP 2030 and SPM were then produced with better justified responsible actors, which have been divided to three key implementation actors namely: responsible KLCH department, key partners, and implementers. The LCS program implementation timeline was also divided into three period of target years (2015-2020, 2021-2025, and 2026-2030 (refer table below), while the operational definitions of actors are shown as follows:

PROGRAMS	2015-2020	2021-2025	2026-2030	Responsible KLCH Dept.	Key Partners	Implementers
2.1.1 Promote Polycentric, Compact Growth Pattern in Kuala Lumpur						
SS 1 Gradual densification in polycentric nodes connected by public transportation	████████████████████			City Planning Dept.	MPK, MPAJ, MOT	Developers

Responsible KLCH department

KLCH department with primary responsibility for initiating, coordinating, liaising with relevant external agencies, monitoring, and/or approving implementation of programs.

Key Partners

Technology providers, funding agencies or entities, and relevant government agencies with approving authority for and/or statutory duty of regulating, facilitating, and overseeing the implementation of programs.

Implementers

Agencies, entities and/or parties who implement, or are needed to implement, programs due to their statutory duty, ownership rights, institutional responsibility, and/or effective serving of collective interests.
